Any Format, Any Device, From Any Location – WolfVision introduces **Cynap**, a new BYOD collaboration, content recording system.

Booth #C3733. WolfVision is pleased to announce the introduction of its new Cynap BYOD collaboration and information sharing system at InfoComm 2015 in Orlando, Florida. A truly *unique* knowledge sharing solution, Cynap is a complete, open platform multimedia interface allowing you to share information and materials – in any format, from any device, to any location – at any time. The system features comprehensive ‘Bring Your Own Device’ capabilities, as well as HD recording, streaming, and media player functionality. Designed to be the true ‘all-in-one’ modern multi-media collaboration system, it solves the limitations of many similar solutions while providing the HD content that tech-savvy organizations demand.

True ‘bring your own device’

Named after the neural structures responsible for passing electrical impulses throughout our bodies, Cynap is designed to connect and incorporate all devices and content in any environment. Cynap is fully compatible with iOS, Android, and Windows devices, and provides an intuitive BYOD solution – allowing up to four devices to share content simultaneously on-screen with 4K UHD output resolution. With support for AirPlay and Miracast mirroring, as well as dynamic content arrangement to optimize on-screen space, it’s quick and easy to get information of all types on-display, ready for instant distribution.

Content recording and personalized lecture capture

Recording functionality is readily available, enabling HD capture of all multi-media presentation and lecture content. Saved sessions can also be automatically uploaded to specific destinations on an FTP server or streaming distribution services when automated distribution of recorded content is required.

Additionally, WolfVision’s vSolution Capture app enables large numbers of students or colleagues to receive and record a direct stream of content from Cynap anywhere within

the network with voice-over commentary and audio included. The Capture app even allows recipients to personalize their own copy of the recorded stream by adding notes and annotations in real-time.

Any format, any device, from any location – at any time

Cynap’s intuitive and user-friendly interface allows individuals to easily access materials, as well as display, play, record, and stream all commonly used media whether locally stored on the user’s device, USB Drive, cloud service, or online – providing unlimited media sharing options during lectures, collaborative sessions, and professional meetings. ‘Live’ materials are also easily integrated, when used in combination with a WolfVision Visualizer. The official launch of the Cynap system will be at InfoComm 2015 at WolfVision **Booth #C3733**.
