## WolfVision brings Cynap to London for BETT 2016

KLAUS, AUSTRIA. 11<sup>th</sup> November 2015. WolfVision, the Austrian manufacturer of presentation technology solutions will be demonstrating its new vSolution Cynap™ wireless presentation and collaboration system at the BETT Show in London, January 20-23, 2016. Cynap is a multi-functional knowledge sharing solution for education and business, which enables users to access, display, record, and share digital content material of all types, from a wide range of different sources.

Cynap is compatible with all iOS, Android, Windows, and Mac devices, and wireless 'bring your own device' (BYOD) functionality allows up to four devices to share information simultaneously on-screen, with up to 4K UHD output resolution. With support for AirPlay and Miracast, and with dynamic content arrangement to optimize on-screen space, information of all types is easily mirrored onto any display, ready for instant sharing and distribution.

"Cynap is far more than just a wireless BYOD solution - it can play, display, record, and stream all commonly used digital files from any device or source. Furthermore, just like all our other WolfVision systems, it's incredibly easy to use: I believe that Cynap is the first collaboration system that truly enables us to leverage our collective intelligence - both in the classroom, and in the workplace." said Thomas Zangerle, WolfVision Innovations and Product Manager.

On-board HD recording of all multimedia presentation and lecture content is provided, and in addition, unlimited numbers of students on the same network as the presenter or lecturer can use WolfVision's vSolution Capture app for iOS, Android, and Windows, to receive and record a direct stream of presentation or lecture content direct from Cynap. Students can personalise their own individual copy of the recorded stream by adding notes and annotations in real-time, further enhancing the value of their own recordings.

When there is a requirement to also incorporate 'live' materials into presentations or recordings, Cynap can be used in combination with a WolfVision Visualizer System, enabling a combination of both digital and analog content material to be shown on-screen simultaneously.
