WolfVision presentation and lecture capture solutions on Show at ISE 2015

Stand No. 1M20, Hall 1. WolfVision's complete range of presentation technology solutions will be on show at ISE 2015, including the latest VZ-9.4F and VZ-9.4L Desktop Visualizers, and the VZ-C6 Ceiling Visualizer – three easy-to-use imaging systems that enable flexible creation, display, recording, and distribution of multimedia presentation content material.

All-in-one lecture capture solution

In addition to the ability to display both 'live' and external content material from a wide variety of sources, these Visualizer systems feature onboard HD video recording that enables the capture of complete multimedia presentations and lectures. Recordings are not limited to the Visualizer's own camera, and external display material from connected devices can also be easily captured and also streamed to computers, tablets, or smartphones as required. All three Visualizers offer integrated WLAN, 8GB internal memory plus additional USB stick memory expansion, and HDMI input and output.

Capture handwritten notes

WolfVision will be demonstrating the VZ-C6 Ceiling Visualizer in use together with the new XXL size dry-erase working surface. These new working surfaces offer a large 920 x 520mm dry-erasable writing area, which can be used as a digital alternative to a whiteboard or blackboard - with the important additional benefit that they can also be used for capturing handwritten notes when used as part of a lecture recording system.

Bring Your Own Device

WolfVision will also be demonstrating the latest version of their vSolution Connect app for iPad, which syncs wirelessly with VZ-9.4 Series and VZ-C6 Visualizers. It enables the iPad to be used as a multimedia control dashboard. In addition to the display of 'live' Visualizer material, virtually all media types from almost any source can be integrated into a presentation or lecture and controlled using a single device. The iPad previews
