WolfVision showcases new **Cynap** presentation and collaboration system at InfoComm MEA 2015

Stand No. TA-E30. WolfVision, the Austrian manufacturer of presentation technology solutions will be showcasing its new Cynap collaboration system at this year's InfoComm MEA in Dubai (October 19-22). The system is a unique wireless knowledge sharing solution, which enables users to utilize presentation content material of all types, from an almost unlimited range of sources. Cynap features comprehensive 'bring your own device', recording, webcasting, and media player functionality, and it can be used either with or without a connected Visualizer system.

Bring your own device

Cynap is compatible with iOS, Android, Windows, and Mac devices, and it provides an intuitive BYOD solution which allows up to four devices to share information simultaneously on-screen, with up to 4K UHD output resolution. With support for AirPlay and Miracast mirroring, and with dynamic content arrangement to optimize on-screen space, it's quick and easy to get information of all types up on any display, ready for instant display and distribution.

Personal lecture or meeting capture

On-board recording functionality enables HD capture of all multimedia presentation and lecture content. Additionally, using the WolfVision vSolution Capture app for iOS, Android, and Windows, enables large numbers of students or work colleagues on the same network as the presenter, to receive and record a stream of presentations and lectures from Cynap. A live stream of all presentation content, including audio can be captured, and recipients can even personalize their own individual copy of the recorded stream by adding notes and annotations in real-time.

All formats, all locations, all devices

Files are easy to access, and Cynap can play, display, record, and stream all commonly used media simultaneously, providing almost unlimited media sharing options during
