### WolfVision Announces Support for Panopto

KLAUS, AUSTRIA – May 22, 2018. WolfVision is pleased to announce additional new recording functionality for vSolution Cynap systems that now enables them to act as capture agents for Panopto.

Working in partnership with Panopto engineers, the WolfVision research and development team has developed a new feature pack for Cynap, which after activation, enables recordings made locally on Cynap to be pushed either automatically or manually to Panopto's video content management system.

WolfVision will be demonstrating Cynap, together with its exciting new Panopto integration, on booth #N1506 at InfoComm 2018 in Las Vegas. A Panopto representative will be available at the WolfVision booth to provide support and to answer any Panopto-related questions that may arise during presentations.

#### Driving the Creation of Knowledge

*WolfVision is a worldwide developer and manufacturer of innovative presentation and collaboration systems.
