

Driving the Creation of Knowledge

Business and Industry Today is extremely proud to present WolfVision UK Ltd as its selected Audio-Visual Equipment Provider of the Month.

Although WolfVision GmbH was officially established in 1994 by brothers George and Martin Wolf, the company's roots date back 50 years ago when the technical expertise and innovation of their father, Josef, was put into full effect. It was in 1966 when the development and production of specialist audio-visual equipment began, and the introduction of the world's first document camera (1974) and the original WolfVision Visualizer (1988) propelled the business to greater success and worldwide expansion.

Headquartered in Austria, WolfVision is internationally operational with its strategically placed offices, which can be found in Japan, Germany, Singapore, Dubai, Canada, the USA and the UK. The provider of systems and services is renowned for the high quality manufacture of Visualizers (also known as document cameras) and its uniquely devised Cynap collaboration system; presentation technology solutions suitable for universities, businesses, schools and other leading organisations.

"Our Desktop and Ceiling Visualizer models offer high quality, ease of use, durability, and reliability that our competitors are unable to match," commented Bryan Sinclair, UK Sales Manager of WolfVision. "The outstanding image quality of our Visualizers ensures that in use, there are no unnecessary on-screen distractions for audiences during presentations and lectures.

"Inspiring engagement, interaction, and collaboration, our latest product is Cynap, a powerful collaboration system for education and business that enables the presentation, recording and sharing of all types of digital multimedia content materials from any source. Essentially the solution of choice for any meeting room, Cynap is flexible, powerful, secure, easy to use and cost-effective."

Suitable for smartphones, tablets and laptops, the all-in-one solution enables information to be accessed using wireless connectivity via any Apple iOS, Mac, Android, Chromebook, Windows and Windows Mobile device. The system is unique in its ability to record up to four different sources simultaneously, and data can be efficiently played, displayed, recorded and

streamed as and when appropriate. If required users can also receive a stream and record a copy of a presentation or lecture to their own personal device for even greater convenience.

When asked about future developments and industry event attendance, Bryan told us: "Our commitment

to continuous innovation means that all WolfVision systems are regularly updated. We add new features, functionality and improvements via firmware updates. This helps to future-proof our systems and extends the longevity of our products.

"Trade shows, meanwhile, are important for us, and those that we have attended so far have been extremely successful. At the recent InfoComm 2016 show in Las Vegas we were awarded 'Best New Document Camera' for the VZ-3neo Visualizer and 'Best Wireless Collaboration Product' for Cynap by RAVE Publications. We also exhibit at Integrated Systems Europe in Amsterdam and the InfoComm shows in China, Dubai, USA, and India."

WolfVision systems are utilised by a staggering 80% of UK universities (including Oxford, Cambridge, St Andrews and University College London) for the on-screen presentation of 'live' materials such as books, 3-dimensional objects, documents and handwritten notes using a connected projector or monitor. The products have also proven valuable in courtrooms for the depiction of evidence and in hospitals for training and meeting applications. WolfVision's clientele includes many major brands such as Google, Apple, Microsoft, Facebook, Audi, Porsche, Nike, Cisco and NASA.
